

Web File Repository (WFR)

HLN has developed a fully web-based utility for file upload, storage, and download. Requiring nothing more than a standard web browser, this utility enables users to upload files to a private directory or a group directory for secure sharing. Application screens can be customized to match your website style. When used in conjunction with SSL, the transmission of files to the repository is fully encrypted. This product is particularly useful for secure file submission and collection applications over the Internet where additional products (like SSH and FTP) are not practical or affordable.

Replace an unmanageable FTP server like this:

With this!

For more information see www.hln.com/wfr.php

Product Features

- ◆ Upload or download files of any format or size through a standard web browser.
- ◆ Secure files through individual usernames and passwords.
- ◆ Share folders within the groups of users.
- ◆ Create nested folders.
- ◆ Rename files or folders.
- ◆ File and directory sorting by name and date.
- ◆ E-mail notification of file changes or downloads from group folders.
- ◆ Easy online utility for managing users and groups.
- ◆ Supports full 128-bit encryption during transmission via SSL.
- ◆ Configurable authentication/authorization backend supports Basic Auth, Cosign, LDAP and passwords out of the box.
- ◆ Data passes easily through any firewall that supports HTTP(port 80) or HTTPS(port 443) traffic.
- ◆ Command-line client allows automated processing of files on remote clients.
- ◆ Runs on Unix or Microsoft Windows Server platforms.
