WFR	Web File Repository	WFR is a fully web-based utility for file upload, storage, and download. Nothing other than a standard web browser is required for a user to upload a file to a private directory for retrieval by an authorized administrator. Application screens can be customized to match website style. When used in conjunction with SSL, the transmission of files to the repository is fully encrypted. This product is useful for secure file submission/collection applications over the Internet where additional products (like SSH) are not practical or affordable.	\$5,541	\$1,662
WFR-ENC	Web File Repository Encryption Module	Provides seamless and transparent encryption of all WFR files on the server.	\$1,108	\$332
WFR-ENC-ENH	Web File Repository Enhanced Encryption Module	Provides enhanced encryption capabilities including selective file encryption with selectable keys, and both symmetric asymmetric keys for encryption/decryption.	\$2,015	\$605
EPHRS-BASE	Integrated Data Repository and Administration Module	<p>The EPHRS-BASE is comprised of the Integrated Data Repository (IDR) and Administration Module (AM). Together these provide the technical framework and core structure for all of the EPHRS public health application modules. The IDR stores all patient identifiable data and provides for patient registration to the system. The IDR utilizes open health information technology architecture. This model provides protection of privacy, maintenance of confidentiality for individuals, and security for information included in the registry.</p> <p>The Administration Module provides configuration capabilities for all application modules, user administration, facility administration, and group/role administration.</p>	\$247,500	\$44,550
IZR	Immunization Registry	IZR is a web based Immunization Registry that provides real-time vaccine recommendations, VAERS Reporting, Certificate Printing, and coverage reporting. IZR adheres to standards consistent with CDC's Public Health Conceptual Data Model and CDC's Guideline for Immunization Registries. The system uses data about the patient	\$82,500	\$14,850

		and guidelines from Advisory Committee on Immunization Practices (ACIP) and American Academy of Pediatricians (AAP) to provide recommended immunizations on an individual basis.		
IZR-VIM	Vaccine Inventory Management	<p>IZR-VIM provides for the shipments, usage, and wastage tracking of vaccines for public and private providers. The inventory management component allows providers to accurately record both VFC and private vaccine inventories and to assign an appropriate funding source. The inventory and usage functions include: orders, shipments, returns, transfers, usage, wastage, and adjustments.</p> <p>Manufacturer, Vaccine Lot Number, Vaccine Expiration Date, Funding Source, Dose per Vial, and Unit Price are examples of the data captured for each vaccine.</p> <p>Bar Code scanning capability for vaccine packages and vials is supported during both vaccine receipt and immunization administration.</p> <p>Physical inventory count processing and reconciliation reporting are provided. Inventory usage by location for each patient is available for viewing and printing.</p>	\$82,500	\$14,850
IZR-RR	Reminder Recall	<p>IZR-RR provides one of the simplest ways to encourage timely visits for immunizations. Parents sometimes overlook their children's scheduled immunization appointments and the Reminder Recall Module facilitates compliance with the immunization schedule. Through this application module, messages are sent to patients or their parents that recommended or required immunizations are due soon (reminders) or past due (recalls). Implementation methods range from simple postcards or letters to telephone calls.</p> <p>Reminders or recalls can be run daily, monthly or weekly. Additionally, you</p>	\$18,700	\$3,366

		may choose to search for reminders or recalls as far in the future as you would like.		
DSM	Disease Surveillance	<p>DSM is a web based module that integrates reportable disease notification, guided surveillance (case work up), and NEDSS compliant reporting by Local Health Departments (LHD) to the State and National Authorities (CDC).</p> <p>Notifications may be entered into the system directly through the web interface or be captured from laboratories and hospitals directly in electronic form.</p> <p>Surveillance, or case work ups, are guided by the standard reportable disease forms and the tests required by disease type.</p> <p>DSM allows for data export for visualization and statistical analysis.</p> <p>Reporting of confirmed cases is consistent with NEDSS data standards.</p>	\$0	\$41,580
PVM	Pre-Event Vaccination	<p>PVM is a web based module that provides guided vaccination workflow, patient tracking, and CDC compliant reporting by Local Health Departments (LHD) to the State and National Authorities (CDC).</p> <p>PVM addresses public health needs by:</p> <ul style="list-style-type: none"> • Integrating immunization tracking, vaccine inventory control and guided workflow that includes patient consent and medical history into one application, • Facilitating electronic upstream reporting from local health departments to a state health department, and then onto the Centers for Disease Control and Prevention (CDC) via secure Internet XML data exchange. 	\$0	\$17,820
CM-CT	Case Management – Case Tracking	<p>Case Management – Case Tracking (CM-CT) allows health care professionals to collect key patient medical history, symptoms, clinical and laboratory data. The patient-specific information is stored in a database configured to provide real-</p>	\$139,150	\$25,047

		<p>time decision support to caregivers.</p> <p>CM-CT is a comprehensive software solution that is patient centric. This allows patients to participate in several public health programs simultaneously without requiring double/triple entry of patient data and demographics.</p> <p>Programs Currently Covered:</p> <ul style="list-style-type: none"> • Expectant Mothers • Resource Persons • Healthy Families • Childhood Lead Poisoning Prevention • Lead Environmental Inspection • Environmental Lead Poisoning Prevention 		
CM-PE	Patient Encounter	<p>CM-PE provides scheduling functionality to track the next task(s) to be completed, i.e. contact patient for home visit, contact patient by phone, verify doctor's appointments, etc. A schedule table holds information such as; next task to be completed, who is to complete the task, when it is to be started, time frame to complete, and status. The scheduler polls for new tasks that have been posted and distributes the information to the appropriate party. A task table is utilized to store the detail information and the sequencing of tasks.</p>	\$27,500	\$4,950
CM-RL	Referral Log	<p>CM-RL allows various agencies to refer patients into CM-CT electronically. This function reduces data input requirements for the public health provider and allows faster patient assignment and enrollment into various programs.</p>	\$18,700	\$3,366
